

Facts:

Globally, wildlife strikes have killed more than 219 people and destroyed over 200 aircraft since 1988 (Dolbeer & Wright 2008).

A 12-lb Canada goose struck by a 150-mph aircraft at lift-off generates the kinetic energy of a 1,000-lb weight dropped from a height of 10 feet (Bird strike Committee USA).

About 90% of all bird strikes in the U.S. are by species federally protected under the Migratory Bird Treaty Act. (Bird strike Committee USA).

The first reported bird strike was recorded by Oliver Wright in his diary, and occurred on September 7, 1905.

The world height record for a strike is 37,000 feet. (Bird Strike Committee USA).

Snarge can be defined as the remains of an animal (mostly blood and/or tissue) on the aircraft or ground after collision.

Our Services:

Environmental /Wildlife Consulting

Loomacres can be called upon to provide consulting services that address a variety of needs of your airport.

Site Visits

Site visits are similar to complete wildlife hazard assessments but are usually completed in one day as apposed to a year long study. Site visits are often required by the FAA to determine if a Wildlife Hazard Assessment is necessary. Also, they are very useful for airports that want to understand the wildlife hazards at their airport but do not have the resources to complete a complete wildlife hazard assessment.

Wildlife Hazard Assessments

Loomacres conducts surveys and assesses the potential risks that wildlife may pose on your airport. In addition to conducting wildlife and vegetation surveys our assessments include surveys of all on site and offsite attractants. We analyze the history of wildlife strikes and make recommendations on how to minimize the potential for future strikes.

Wildlife Hazard Management Plans

Loomacres Inc. can assist the airport with the development of a Wildlife Hazard Management Plan that guides the airport at reducing the potential for bird and wildlife strikes while maintaining a suitable environment for both people and wildlife.

Training

Loomacres Inc. offers the Wildlife Hazard Management and Wildlife Identification Training that is required by the FAA. We can come to your airport and tailor the course to your airports specific needs or you can attend one of our regularly scheduled trainings.

Our Services cont.:

Wildlife Conflict Resolution

Loomacres provides dispersal and removal of hazardous wildlife utilizing various dispersal and exclusion devices including K9 and falconry services.

Database Creation

Loomacres Inc. can assist airports in the creation and design of a database that will enable the airport to accurately record all wildlife activities. A database allows for airports to easily analyze all wildlife activity and identify trends which allows for more efficient wildlife hazard management.

Permitting Assistance

Loomacres Inc. acts as a liaison with both State and Federal agencies to assist airports with any necessary application, permitting and reporting procedures. Loomacres Inc. assists airport personnel with the maintenance and renewal of Wildlife Permits.

Professional

Our staff has the experience and credentials to meet the high standards that are required by the FAA and your airport. Only the most professional company can provide quality services in the unique environment found on airports.

Reliable

Loomacres Wildlife Management provides reliable service by consistently reacting to unforeseen conditions.

Ethical

Loomacres Wildlife Management sets the standard for ethics in the industry. Loomacres efficiently serves our clients with safe, humane, and innovative solutions that work.
